PROFESSIONAL PROFILE

A 24/7 hardworking professional with 15+ years of experience in various programming fields. In those years of service, I had a few good opportunities to work with big companies and to help a few start-ups and other medium sized mobile and web agencies. Also I could improve my communication skills very much and learnt how to collaborate with clients or other team members remotely around the globe. I always look forward to meeting new clients and helping them with realising their imaginations and with full- filling their needs. I believe that is the best way to put myself in a good use for myself and clients.

EXPERIENCE

Self-employed

February 2018 - Present

Full Stack Developer

Mainly worked on Web projects, building websites both front-end and back-ends - <https://getbarry.co>, <https://curoglobal.com>. On some projects, I was responsible for the developments of mobile applications as well. React, Angular, Bootstrap were good choices and I liked the matured Laravel for back-end. Trying to learn Golang and Python(Django).

Stitch Healthcare

June 2015 – February 2018

Lead Mobile Developer

Built mobile clients for <https://teamstitch.app> - which is healthcare messaging app. It's basically a clone of Slack but for medical professionals. All of features were built in our own ways. Lead a team of 2~5 mobile developers.

Tipsi

December 2014 - June 2015 (7 months)

Lead Mobile Developer

Managed team of 3 mobile developers to build iOS and android mobile applications for Tipsi. Various social networking SDKs, High standard for app UI/UX, Vuforia AR SDK to scan wine labels, ...

TrekSoft

April 2014 - December 2014 (9 months)

iOS App Developer

Built iOS/Android mobile clients respectively in Java/Objective C for Treksoft service. Nice UIs, Communication with server, Session management, Cache and its use.

Senior Software Engineer

September 2009 - July 2011 (1 year 11 months)

Worked on various internal project for desktop and mobile applications Notable projects:

1. Audio streaming server and mobile clients: Windows, Mac, iOS, Android
2. Messenger solution for internal use: Windows, Mac, iOS, Android
3. File sharing system for internal use: Windows
4. Workflow system based on Java/JSP/Struts, PHP HTML5, CSS3, JQuery, Bootstrap, PHP, MySQL

WebFront/C++ Developer

April 2007 - September 2009 (2 years 6 months)

Worked on various projects to build websites, mainly responsible for front-end and worked with a lead designer who provided PSD files. Developed windows desktop application for internal use. Technologies: HTML, CSS, Javascript, JQuery, PHP, MySQL, C++, Socket
